

## Information for Solo Pilots

1. Pilots should plan their flying sequence such that they can always regain the Display Line without infringing the minimum lateral separation distance from the Crowd Line. For practise purposes, always use a runway centreline. The Flying Display Director will confirm whether the centreline is appropriate for a certain display, you may need to fly offset your display from the centreline if required.
2. Where Flying Displays are held at an aerodrome, the CAA will normally authorise the Flying Display Director to allow pilots to fly down to the minimum height specified in their individual Display Authorisation (DA). Solo Pilots must make sure that the display does not compromise their DA.
3. Where Flying Displays are held away from an aerodrome, the CAA will impose a minimum height. This is usually 200 feet above ground level over land and 100 feet above surface level over water. Higher or lower minima may be imposed if considered appropriate at a particular venue. The Flying Display Director will advise of the minimum heights applicable at the Flying Display in both verbal and written briefs.
4. Aim for a display routine that lasts for 8 – 10 minutes.
5. Only manoeuvres that are known and have been practised are to be flown.
